Overview: The purpose of this series is to provide students with short vignettes written in board format to review material in the basic sciences. Each book covers a specific topic and covers an array of most commonly seen topics on the boards. This series is not intended to be a complete review, but rather a supplement to course material and other review books. For this reason, it is important to keep the books small (under 125 pages) and inexpensive. Topics covered in the Step one series are: Anatomy, Behavioral Science, Biochemistry, Microbiology: Virology/Immunology/Parasitology (previously named Microbiology I), Microbiology: Bacteriology (previously named Microbiology II), Pathophysiology: Pulmonary System (previously named Pathophysiology I), Pathophysiology: GI System (previously named Pathophysiology II), Pathophysiology: Cardiovascular System (previously named Pathophysiology III), and Pharmacology. incorporate better templated format that reflects a lighter, more systematic approach Trim size will be reduced to 6 x 9 to better fit in a white coat pocket Index included with each book An appendix of lab values with each book Discussion and treatment for each vignette will be included on a separate page for easier self-quizzing Captions at the end of the page will be hidden to facilitate self-quizzing Mnemonics will be added as a separate pedagogical feature 4-color inserts in each book will omit the need for the accompanying color Atlas. Reviewer Quotes: This is a good supplement to second year pathology and preparation for boards and shelf-exams. Perfect for fragmentary reading, while waiting for an elevator or on the minute or two before the lecture starts. Allows the student to capture this time that is otherwise lost for productive use.- MS2, Texas Tech I think that this approach will help me on the USMLE a lot more than studying from a more detailed text. This is much more focused and provides an understanding of clinical cases, unlike most biochemistry lectures. just memorizing a lot of facts. It seems designed for those who want to kill the boards rather than just pass.- MS2, UCLA This book is best used for either studying for the Boards or for class supplementation. In addition, for owners/readers of the First Aid for the USMLE Step 1...the UCV series is an unparalleled complement!! - MS2, Mount Sinai School of Medicine

How to Succeed at Medical School

You have two choices: Be attacked by a wolverine or go on a date If you're smart, you chose wolverine. If not—well, wait, are you sure you don't want the wolverine? Happily ever after isn't so easy anymore. It's all speed dating, matchmaking terror, and visits to your therapist. Whether it's the mortification, frustration, or just plain exhaustion that's got you ready to give up on love, this book is here to help. After all, there are only two ways out of the dating scene. One involves giving up all your possessions and taking a vow of chastity. The other involves finding a permanent (or semi-permanent, anyway) partner. This book will help you get through the latter. From the bar scenes and the first sexual encounter to deciding whether to move in together, *Dating Makes You Want to Die* walks you through every stage of the dating process—and, like a Belarusian arms dealer, provides the heavy artillery you'll need to destroy the potential problems lurking in each one. Each chapter discusses the problems that can arise when dating, offers a remedy, and includes hilarious sidebars and quizzes to further help you prepare for the jungle out there. Some sanity-keeping tips include: How to make a first impression that is more \"good\" than \"totally crazy.\" How to not panic the moment you realize you're actually in an honest-to-God relationship. Helpful, foolproof breakup lines for total damage control. Intelligent, snarky, and entertaining, *Dating Makes You Want to Die* may make you actually want to live through a relationship.

Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for

speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie. Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

This is the first book to be devoted exclusively to rare tumors in children and adolescents, and its aim is to provide up-to-date information on their diagnosis and clinical management. The opening section addresses general issues including epidemiology, risk factors/etiology, biology and genetics, early detection, and screening. It also discusses solutions to assist in the management of rare tumors, such as international networking and internet platforms. In the second section, specific malignancies are described, with practical guidance on diagnostic workup, multimodal therapy, follow-up, and adverse effects. Discussion of differential diagnosis encompasses both frequent and rare tumor types, which should enable the clinician to take rare entities into account during the diagnostic assessment. Each chapter goes on to provide detailed therapeutic guidelines for specific rare tumors. The authors are a multidisciplinary group of specialists who have dedicated themselves to this group of tumors.

Selfassessment Colour Review of Clinical Anatomy

Adolescent endometriosis is a previously overlooked disease in children, the true prevalence of which is still unknown but has been estimated between 19-73%. There are numerous initial challenges faced by adolescents suffering from delayed or undiagnosed endometriosis apart from experiencing chronic pain, such as: school/work absenteeism, false diagnoses/treatments, erroneous physician referrals, unnecessary radiological studies, radiation exposure, and emergency room visits as well as early exposure to narcotic pain medications and subsequent drug tolerance, resistance or even addiction. This text presents a clear history of physician and patient understanding and awareness of endometriosis in adolescents. It lays the groundwork for this condition with background information on endometriosis in general followed by a more focused look at endometriosis in adolescents. Leading experts in the field provide chapters on the different locations where endometriotic lesions can present in adolescents as well as identified risk factors and concomitant diseases of which it is important to be aware. In addition to the clinical presentation, this book also provides information on breaking down existing barriers, such as stigma, and current activism and awareness of this condition. Adolescent Endometriosis is a first-of-its-kind text that focuses exclusively on endometriosis in the adolescent population. Written by experts in the field, this book is a comprehensive resource for clinicians in all medical disciplines that treat adolescent age girls.
